TREGZI®
(allogeneic regulatory T cell immunotherapy with HSPC and T cells-vldq) Suspension For IV infusion

Hello Friends,

If you're reading this, you or your loved one may be facing one of the most uncertain moments of your life.

I also know what is waiting on the other side of treatment.

When I was first diagnosed with acute lymphoblastic leukemia (ALL), I quickly learned there are no guarantees in life. While that reality can be scary, no one has control over the future, even without cancer. What we do have control over is how we respond to what's in front of us.

So, I stopped trying to control every unknown and found routines. I walked every day. Worked when I could. I even listened to the same song over and over again. I learned to live with a steady level of determination.

In fact, those are the moments that helped carry me through.

I first heard about TREGZI when my care team and I started talking about stem cell transplant. TREGZI is a treatment used in stem cell transplant to rebuild the blood and immune systems. It's for adults with certain blood cancers. Like traditional allogeneic stem cell transplant, TREGZI offers a chance for a cure. It is precision-engineered with 3 types of cells that work to support recovery and improve survival without a complication called chronic graft-versus-host disease.

For these reasons and more, TREGZI was the right choice for me.

Some days were hard, really hard. But they were also some of the most meaningful and beautiful moments of my life. Recovery gave me time with my wife that I will treasure forever. It taught me gratitude in a way I never understood before. It forced me to slow down and recognize how lucky I was to simply have this chance.

I realized that you cannot go through an experience like this without seeing how much goodness exists around you. Nurses, doctors, researchers, donors, caregivers—complete strangers dedicating their lives to helping someone else survive. It changes you.

Think about how incredible that is.

If you're just starting your journey, take one step at a time, ride each wave as it comes. Give yourself the grace to live with uncertainty. And be present in every moment. In ways you may not yet see, this journey can reveal a sense of resilience, gratitude, and strength that will stay with you long after you have had your transplant.

With gratitude,
Casey

Real patient
Living with acute lymphoblastic leukemia (ALL)
Loves waves, good food, and enjoying both with friends.

I wanted to get back to the life I love.
